Art Unit: 1771

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-10, 12-16, 18-32 are rejected under 35 U.S.C. 102(b) as being anticipated by

Bridges et al, U.S. Patent No. 5,624,420.

Bridges et al discloses a bonded material comprising first and second layers of liquid impermeable material which are at least partially overlapped and which comprise a plurality of ultrasonic bond points which bond the layers together. The bond points are aligned in at least two parallel rows and are offset from one another, see figs. 1A-1H. The point bonds may have a diameter of about 0.05 inches and the bond points may be spaced about 0.01 inches from each other. See col. 7, lines 23-55. The first and second layers may comprise plastic films and nonwoven webs. See col. 8, lines 22-57. A preferred material for the first and second layers is Series 6700 Nonwovens, which is a breathable material, (see col. 4, lines 17-35 of U.S. Patent No. 5,622,589). Bridges et al also discloses diapers, training pants and other hygiene articles which comprise the bonded material. Bridges et al also teaches a method of bonding two layers of liquid impermeable material comprising the steps of ultrasonically bonding the layers together with point bonds and displacing portions of each layer of material. See col. 7, lines 1-22. As seen in Fig. 1E, each of the bond points in each of the rows are equally spaced.

Art Unit: 1771

3. Applicant's arguments filed 9/19/02 have been fully considered but they are not persuasive. Applicant argues that Bridges does not show that each of the bond points in each row are equally spaced relative to the bond points in each of the other rows. However, this argument is not persuasive because the claims as currently presented require only that "the bond points are aligned in at least three parallel rows, each of the bond points in each of the rows equally spaced apart, and the bond points in adjacent rows are offset from one another." Thus, the claims do not require that the bond points in each row have the same spacing as the bonds points in the other rows, but only require that the bonds points in each of the rows are equally spaced apart. Bridges meets this limitation.

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
